

Circular procurement: how do we get there?

Frances Edmonds
Head of Sustainable Impact
HP Canada

Circular procurement:
how do we get there?

Radical
Collaboration!

What is Circular Procurement?

“**Circular or Sustainable Procurement**” ensures that buyers...

- ...obtain the **best value for money** when purchasing...
- ...the **most sustainable services and goods**...
- ...from the **most sustainable suppliers**, in support of...
- ...the organization's stated **purpose and strategic goals**.

Looking Forward – 2021 and Beyond:

Becoming the World's most sustainable and Just IT company by 2030

CLIMATE ACTION PLANET

Drive toward a net zero carbon,
fully regenerative economy

75%
circularity for
products and
packaging by 2030¹

NET ZERO
greenhouse gas
emissions across the
HP value chain by
2040

Use **30%** postconsumer **recycled**
content plastic across HP's personal
systems and print product portfolio by
2025²

HUMAN RIGHTS PEOPLE

Advance human rights, social justice,
and racial and gender equality

Reach
ONE MILLION
workers through
worker empowerment
programs by 2030³

Women represent
greater than **30%**
of our workforce in
technical and
engineering roles
by 2030

Achieve **50/50**
gender equality in HP
leadership by 2030⁴

Currently
MOST DIVERSE
Board of Directors of
any U.S. tech company

DIGITAL EQUITY COMMUNITY

Break down the digital divide by enabling
access to education, jobs, and healthcare

Accelerate digital
equity for
150 MILLION
by 2030

Enroll
1 MILLION
HP LIFE users
between 2016 & 2025

PATH
Partnership and
Technology for
Humanity
initiative will help
pave the way
toward digital equity
for underserved
communities
around the world

THE CURRENT PROBABILITY OF STAYING BELOW 2 °C OF WARMING IS ONLY 5%!

- If all countries in the Paris Agreement fulfilled their pledges to reduce GHG emissions, the probability rises only to 26%
- Nations need to increase their Paris Agreement pledges by 80% to have an even chance of staying below 2°C.

BUT, efforts needed for a pathway with a strong chance of meeting the 2°C target are not radical.

"Achieving the Paris Agreement's temperature goals is something we're not on target to do now, but it wouldn't take that much extra to do it,"

lead author Peiran Liu.

Paradigm shift

- Change in thinking
- Change in product design
- Radical collaboration
- Reverse cycle

BARRIERS TO OVERCOME

Government policies and regulations have not kept pace: eg waste versus reuse shipping trans boundary

Retail channels and salesforces are traditionally incentivized to sell products not services = linear lock in

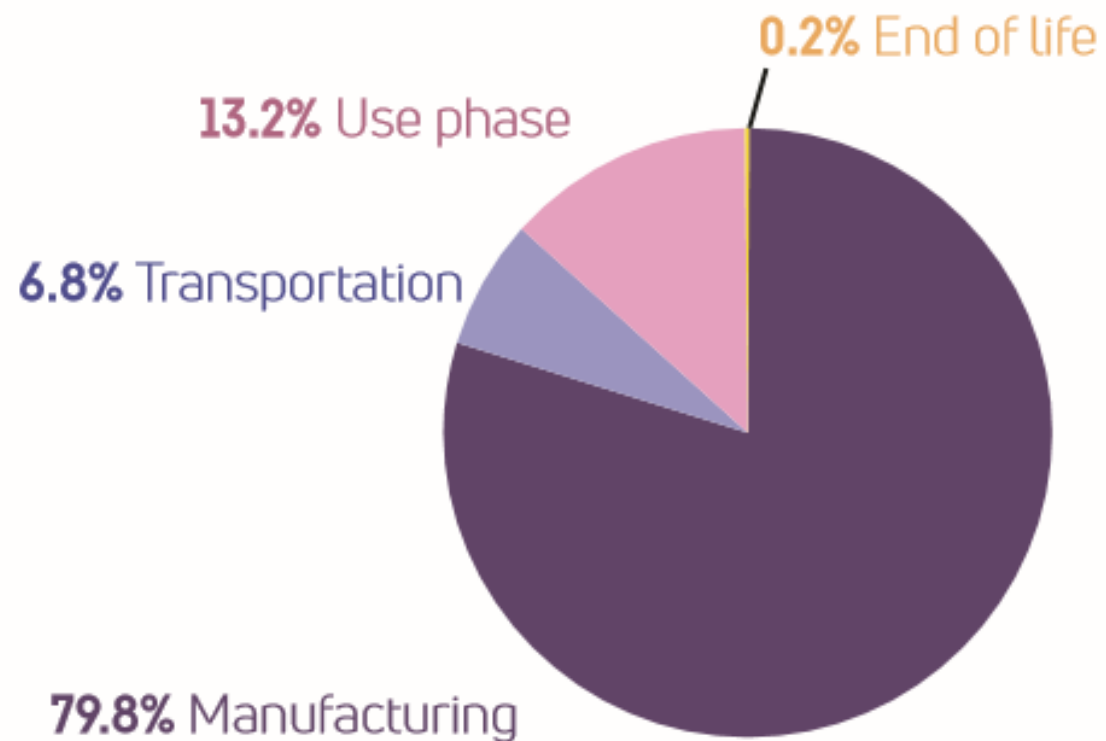

Circular models disrupt the status quo and new business models can destroy or cannibalize an existing value proposition- how does a company stay in business through the transition? If we cant spell this out then they wont do it

Material quality is essential to ensure technical performance

Collaboration is key as the journey is evolutionary

Emissions by life cycle phase, notebooks [%]

Adding 2 years of use
to an average PC
reduces the carbon
footprint by 30%!

Product or Device as a Service has lower environmental impacts than retail for all Lifecycle Assessment categories

Compared with transactional sales, DaaS

- reduces GHG emissions by 25%,
- improves resource efficiency by 28%,
- decreases ecosystems impacts by 28%,
- and reduces human health impacts by 29%.

Impact reductions range between 25-30% compared to the linear model.

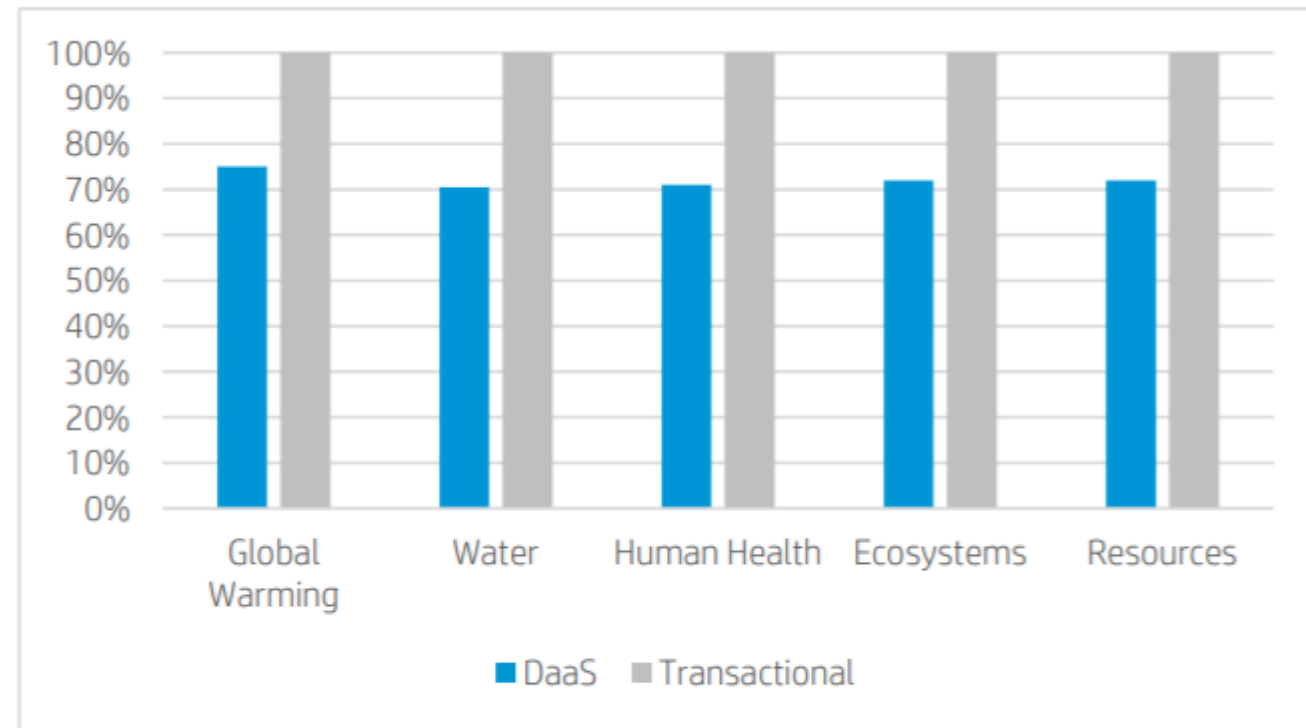

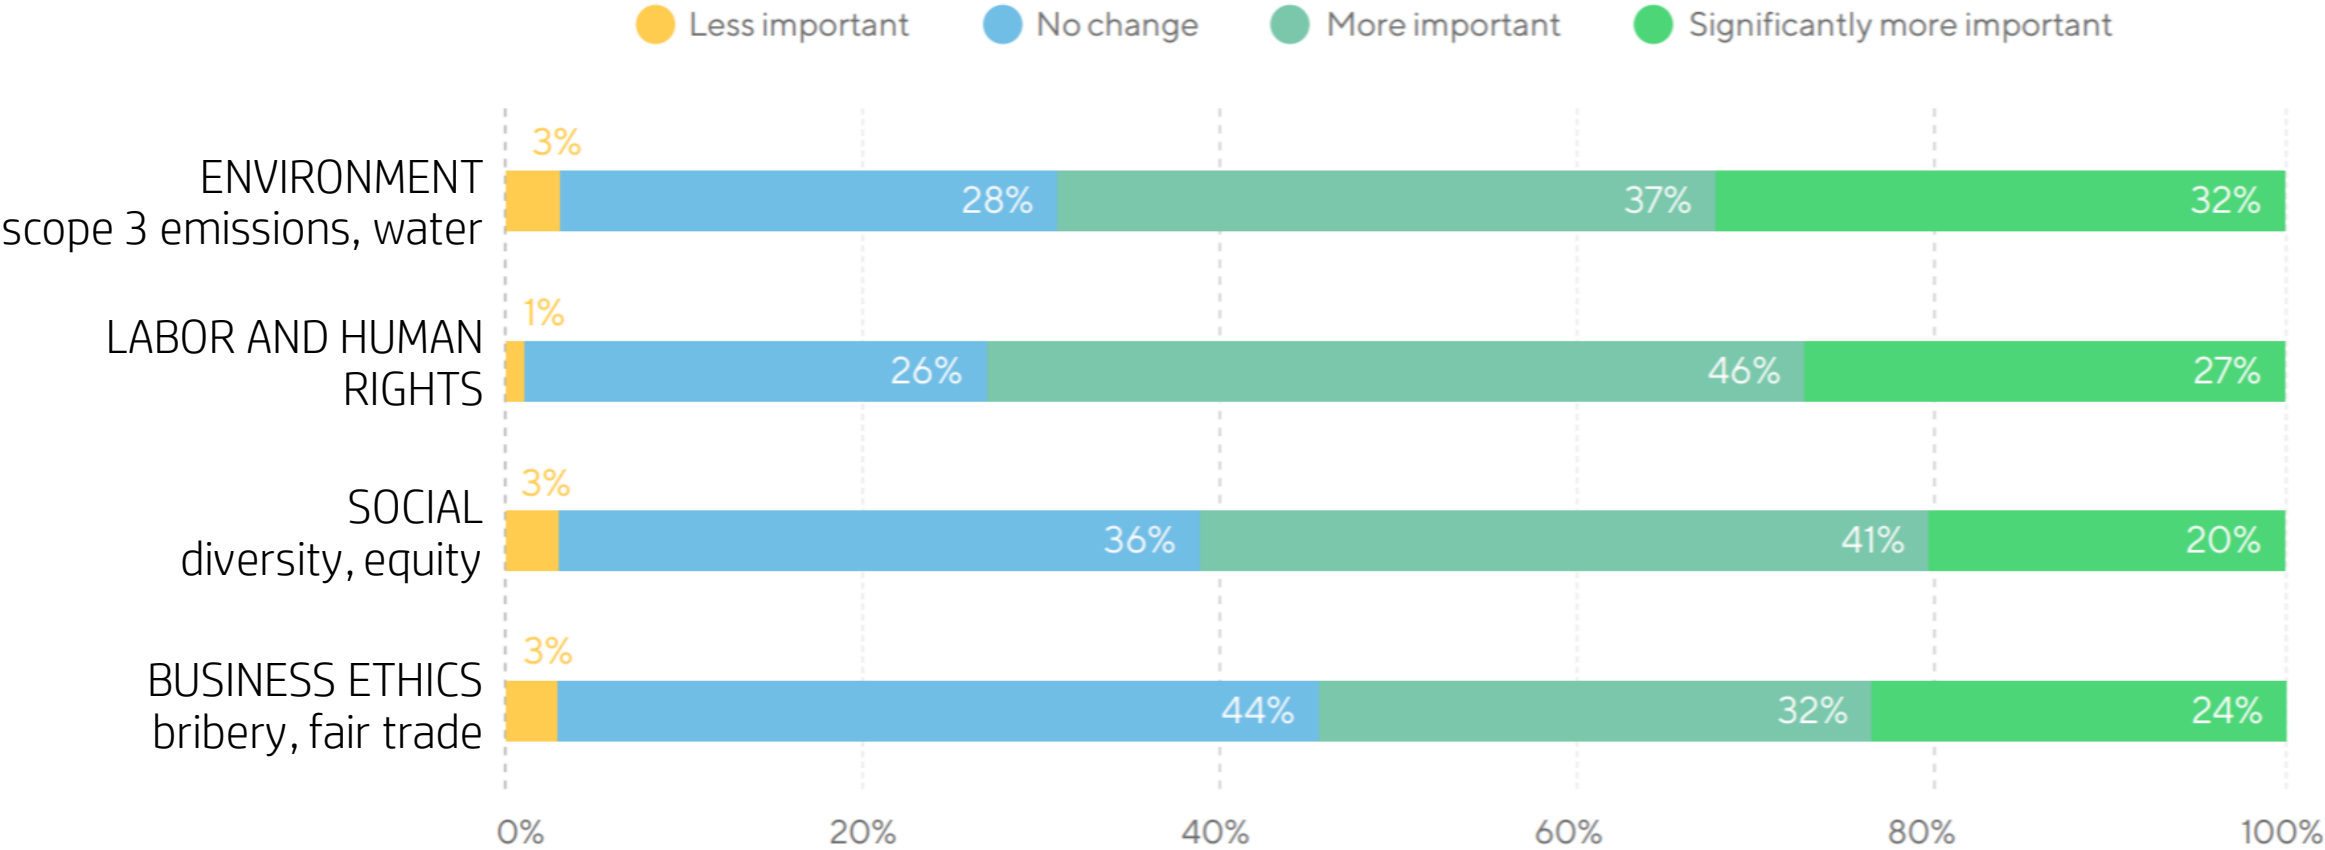

Figure 1: Comparison of Device as a Service to traditional transactional model

Global trend, including changes due to pandemic

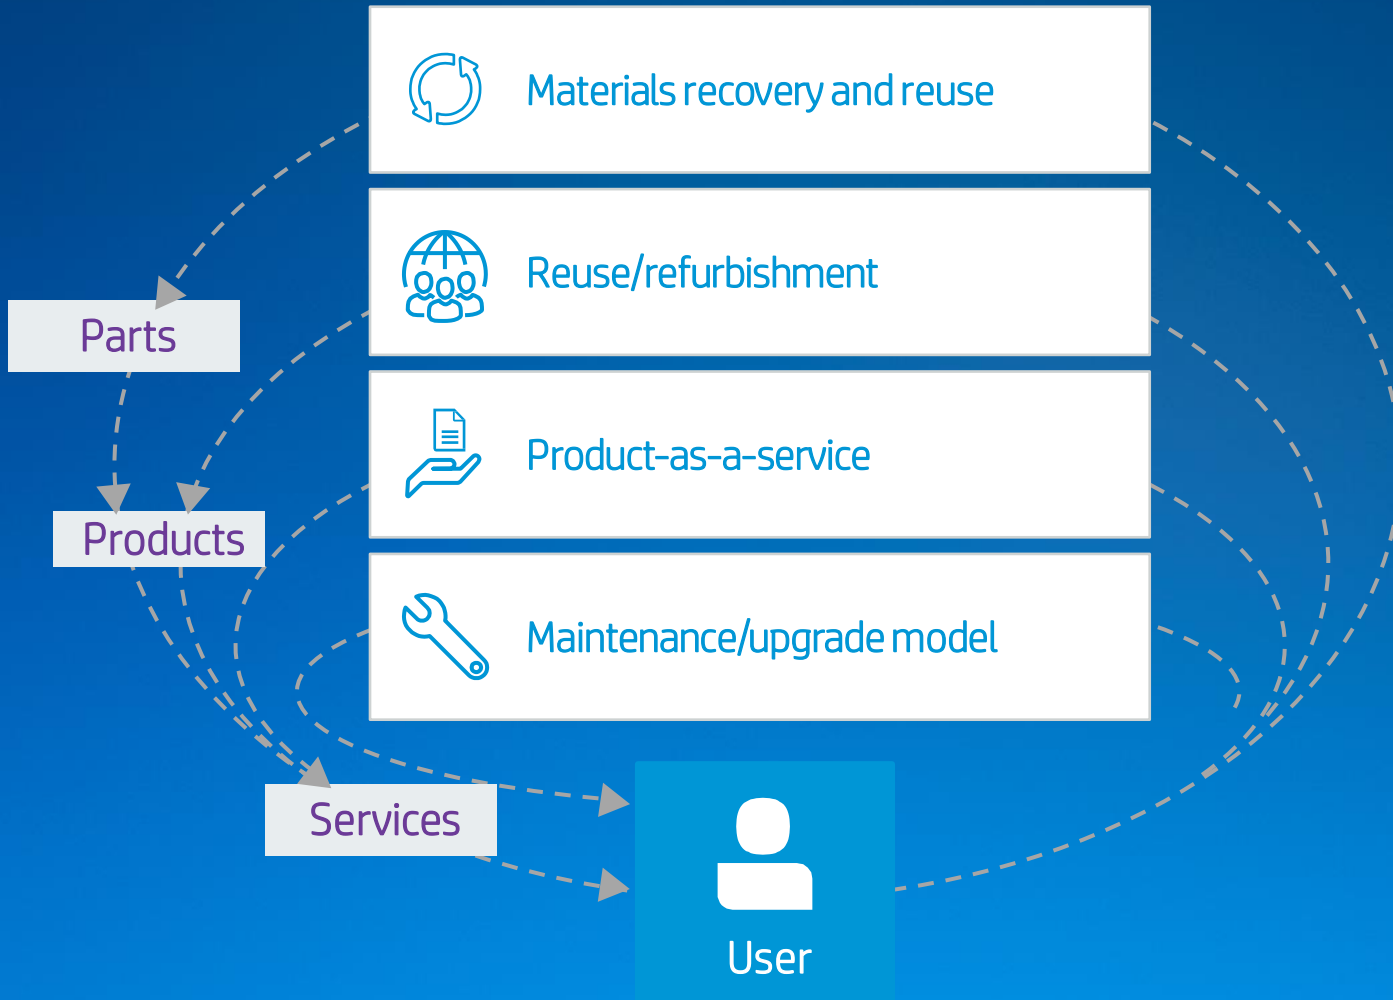

Have the following sustainability issues gained or lost significance in shaping your procurement strategy (supplier selection and management) over the next few years?

HP'S Strategy & Goal of 75% product & packaging circularity by 2030

HP's circular economy strategy

Key RFX questions that probe these areas

- Do you have closed loop recycling what are your goals?
- What are your goals for circularity
- Do you offer refurbished products
- How do you ensure my end of first life product gets a second life?
- Can I buy as a service?
- Repairability:
 - Availability of spare parts,
 - Availability of repair manuals
 - Durability testing
 - Are products upgradable
 - What is the IFIXIT score?

COMMON CIRCULAR RFX QUESTIONS ASKED OF HP

Not necessarily the best questions as they risk greenwashy answers but:....

- Specify at least two examples of implementation of an eco-design approach among the products proposed in this contract
- Do you offer refurbishment / retrofit services for products sold / leased to your customers in order to lengthen devices' lifespan ? If no, describe all initiatives (existing / to come) you have undertaken towards this topic
- Beside new products, do you offer remanufactured products to your customers ?
- How long do you offer spare parts, minimum 3 years or more.
- How many % of recycled plastics do you use in the products, out of parts >25 g.
- Does the product meet durability testing according to MIL-STD 810H(drop test, temperature changes, humidity)
- How do you integrate decarbonization into your activities?
- How do you measure sustainability and decarbonization in your activities?
- What are your End-of life options?
- Refurbished products/programs (DRS), repairability,
- What is your stand on the Circular Economy

RECOMMENDED TOPIC AREAS TO ADVANCE CIRCULAR RFX

The single most impactful thing you can do
is to buy as a service!

- Post consumer recycled content in hardware & packaging
- Spare part availability > 3 years bonus for longer
- Require multi attribute Eco Labels like EPEAT as mandatory minimums
- Durability testing
- Long life batteries for notebooks
- Carbon Neutral services like Managed Print

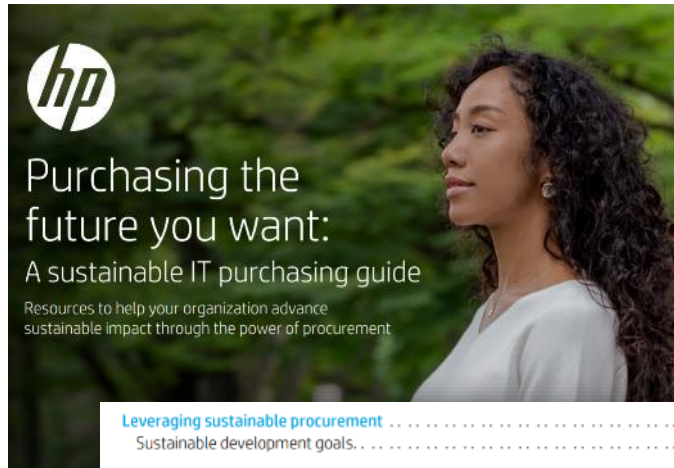

SOME EXAMPLES OF WEIGHTING OF SUSTAINABILITY IN TENDERS

COUNTRY	DETAILS	VALUE	WEIGHT of Sustainability in evaluation
Norway	Stavager Municipality, PC	2 M USD	60%
Germany	Federal customer, PC	>40 M USD	50%
New Zealand	Public sector, IT	X	40%

Most often *compulsory* criteria and 5–15% weight on *award* criteria (in selected EU countries).

Top 12 Sustainable Public Procurement criteria for Print Hardware, Top 8 for Supplies

Top 12 Sustainable Print and Imaging Equipment procurement criteria Recommended for public sector To be used together with top 8 for Supplies		
Topic	Criteria Type*	Why it matters
Environmental		
Energy Efficiency	Land/A	Energy efficiency in Print and Imaging Equipment hardware can result in significant reduction of energy costs. This can result in significant energy and financial savings for businesses and customers. (EN 50524:2012, 12.1)
Product Carbon Footprint (PCF)	A	Product Carbon Footprint is an important indicator of a product's carbon and environmental impact throughout the product lifecycle that can and should be minimized. (ISO 14040, 12.1)
Duplex and A4-Print	A	Build to last to use less
Links on carbon emissions	A	Limiting
Recycled material content in hardware	Land/A	Recycled
Recycled material content in hardware	Land/A	Recycled
Recycled material content in hardware	Land/A	Recycled
Recycled material content in hardware	Land/A	Recycled
Recycled material content in hardware	Land/A	Recycled
Recycled material content in hardware	Land/A	Recycled
Recycled material content in hardware	Land/A	Recycled
Recycled material content in hardware	Land/A	Recycled

TOP 8 Sustainable Supplies Procurement Criteria Recommended for Public Sector		
Topic	Why it matters	What criteria should be used?
Product responsibility (WEEE, RoHS, REACH)	Compliance with European Union (EU) directives and regulations.	Compliance with EU directives and regulations.
Product responsibility (WEEE, RoHS, REACH)	Compliance with European Union (EU) directives and regulations.	Compliance with EU directives and regulations.
Product responsibility (WEEE, RoHS, REACH)	Compliance with European Union (EU) directives and regulations.	Compliance with EU directives and regulations.
Product responsibility (WEEE, RoHS, REACH)	Compliance with European Union (EU) directives and regulations.	Compliance with EU directives and regulations.
Product responsibility (WEEE, RoHS, REACH)	Compliance with European Union (EU) directives and regulations.	Compliance with EU directives and regulations.
Product responsibility (WEEE, RoHS, REACH)	Compliance with European Union (EU) directives and regulations.	Compliance with EU directives and regulations.
Product responsibility (WEEE, RoHS, REACH)	Compliance with European Union (EU) directives and regulations.	Compliance with EU directives and regulations.
Product responsibility (WEEE, RoHS, REACH)	Compliance with European Union (EU) directives and regulations.	Compliance with EU directives and regulations.

Top 14 Sustainable Public Procurement criteria for PC

Top 14 Recommended SPP criteria – PC Compiled by HP Inc., considering the basic principles of EU Sustainable Public Procurement (SPP) – Nov, 2020				
Environment				
Topic	Type	Suggested text to include in tender	Verification	Why this is important
1. Eco Labels	A	EPEAT: Offered computers and displays should be registered in the country where the bid is made and meet: - EPEAT Silver level (0.5x points) - EPEAT Gold level (x points) TCO Certification: Offered computers and displays should be certified according to TCO certified ecolabel standard valid at the time when the product was put in the market.	Listed for the relevant country at https://ecoprint.org Listed in TCO Certified global product at https://tco-certified.com/product-lineup/	Ecolabels represent a voluntary method to demonstrate performance relating to environmental and/or social topics in relation to the product or its supply chain. Use of objective and respected independent ecolabels allows purchasers to make informed decisions. There are Type 1, 2 nd party certified and Type 3, self-declared, ecolabels according to ISO 14024 standard.
2. Product carbon footprint, PCF	A	The Product Carbon Footprint (PCF) should have been analysed and documented in accordance with ISO 14040 series.	The PCF analysis document performed according to ISO 14040 series has been provided for offered products. This criterion is included as 4.8.1.1 Optional—Product life cycle assessment and public disclosure of analysis in EPEAT, EEE 1569, 1 st Standard referring to the ISO 14040 series.	Product Carbon footprint is an estimate of the total climate change related from the product life cycle, manufacturing to end of life. The PCFs are important to guide design strategies as carbon dioxide equivalents are often referred to as 'the currency of the environment'.
3. Recycled content—product	C and A	C: Declare if the product contains post-consumer recycled content - plastic, in parts over 25 g. Yes/No. A: A maximum of x points (to be specified) may be awarded for higher content.	Compulsory criteria: Aligned to either EPEAT standard EPEAT Std 1680, 1 st 2018 (Recycled percentage as defined in BS EN 15343:2007) or SC5 Services Recycled Content Standard V7.01 or TCO criteria. Self-declaration by the supplier, for example The ECODEclaration according to international ECMA-370 std. Award criteria on OBP: certificate to the UL 2809 std. OR OBP Certification Program was codveloped by the NGO Zero Plastic Oceans and the certification group Control Union. https://www.obp-cert.org/	Recycled content in products supports a circular economy, helps reduce environmental impact and keep materials in use at their highest value as opposed to recovery or disposal.
C: Compulsory, Technical Specification A: Award				

TOP 12 for Print: 8 *Environmental* Criteria and 4 *Social* criteria

Topic	Criteria Type*	Why it matters
Environmental		
Energy Efficiency 	C and A	Energy efficiency in Print and Imaging Equipment hardware can result in significant reduction of energy waste. This can result in significant energy and financial savings for businesses and consumers. SDG** 12,13.
Product Carbon Footprint (PCF) 	A	Product Carbon Footprint is an important indicator of a product's carbon and environmental impact throughout the product lifecycle that can and should be minimized. SDG 7,12,13.
Duplex and Pull Print 	A	Built in technology to automatically print on both sides (duplex printing) can help the end user to cut down on the amount of paper used. Through the life cycle of a printer, paper use makes up a significant part of the environmental impact. SDG 12.
Limits on indoor emissions 	A	Limiting indoor emissions from printer system, hardware and supplies, contributes to maintaining high standards of indoor air quality. SDG 3.
Recycled material content in hardware 	C and A	Recycled content helps support a circular economy and reduces environmental impact by reducing impact from the manufacture of new raw materials. SDG 12.
Sustainably Sourced Packaging 	C and A	Recycled content in packaging helps reduce the environmental impact by preventing singling out of new raw materials. Recycled material that the resources should be used in reducing deforestation. SDG 12.
Low Halogen printed circuit boards (PCB) 	A	Eliminating substances of concern reduces sustainability impacts. Toxic, hazardous substances are substituted in place to ensure product safety. SDG 12.
Spare parts availability 	C and A	Availability of spare parts allows for a critical part of the circular economy, ensuring products are manufactured and processed and repaired. SDG 12.
Social		
Human rights and ILO * conventions 	C	International Labor Organization (ILO). People working in the Supply Chain should be treated with respect and dignity and their work environment should meet international standards. In analysis of product areas within public procurement associated with social and environmental risks, IT industry supply chain is often included. Customer's stakeholder expect compliance with legal requirements and best practices in human rights. SDG8,10, 12.
Transparency—Suppliers 	C or A	Transparency in supply chain and congregated data published in a yearly sustainability report with a description of risk assessment and related processes shows awareness to issues and compliance transparency. SDG 8,10,12.
Conflict minerals—public policy 	C	As part of commitment to responsible sourcing, human rights and sustainability, the company must have a publicly available policy related to the possible use of four conflict minerals: tantalum, tin, tungsten, and gold. SDG 8,10,16.
Conflict minerals—due diligence 	C	As part of commitment to responsible sourcing, human rights and sustainability, the four conflict minerals: tantalum, tin, tungsten and gold must be included in the supply chain assessment. SDG 8,10.

SUSTAINABLE IT PURCHASING PILOT RESULTS

HP & Green Economy Canada plus 10 BPS organizations

Participants have identified four significant areas critical to advancing sustainable procurement within the broader public sector:

- Forging new relationships between functional areas/departments;
- Gaining employee support;
- Incorporating scored sustainability criteria into the procurement process; and
- Obtaining buy-in and commitment at the most senior level.

*Stay tuned for the full white paper – published by Green Economy Canada
for the CIC Technology session on November 17th*

How to make it happen

You can start tomorrow

- Desire and commitment to go in this direction
- Resources – human, financial, time
- Management
- Accountability
 - Don't forget to engage your employees

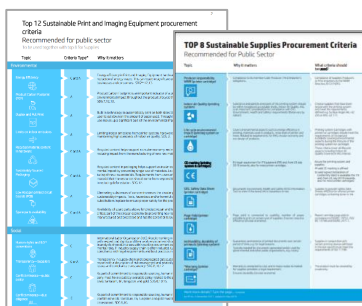

keep reinventing
